## ABOUT ME

I am a Software Engineer specializing in backend, passionate about programming and building solutions that actually work in the real world.

In various projects I have had to assume the role of technical reference, participating in architectural decisions, promoting good practices and helping to technically organize the developments.

I'm an analytical and critical person when it comes to the code I write. I'm interested in doing things right, prioritizing quality, clarity, and long-term sustainability over quick fixes. I strive not only for software that works, but also for it to be maintainable and add real value to the product.

## EXPERIENCE

Santander Technology, Argentina (Current)- *SSR Software Engineer*

- I work as a Backend Engineer, actively participating in functional analysis, technical estimations, and solution design within a highly critical banking environment.
- I develop high-impact products and functionalities, including:
  - Integration with YPF
  - Implementation of QR Payments
  - Development and integration of DEBIN
  - Development and integration of financial products
- I primarily work with Java and Spring Boot, designing REST APIs, business logic, and scalable solutions focused on performance and security.
- I act as the team's technical reference, supporting initiatives, guiding other developers, and promoting good architecture and code quality practices.

Ayi Group, Argentina- *Full Stack Developer*

- I participated in the development of the FRASCOS product for Naranja X, a key functionality within the company's fintech ecosystem.
- I worked mainly on the backend using Kotlin and Java with Spring WebFlux, developing reactive services geared towards high concurrency and performance.
- I implemented REST APIs, business logic, and integrated components with AWS, following good architecture and code quality practices.

---

### Baufest, Argentina - *Full Stack Developer*

- I participated in the development of solutions for the BBVA client within a banking environment of high criticality and technical demands.
- I served as a technical reference for both the internal Baufest team and the bank team, being a point of consultation in technical decisions, definition of solutions and best practices.
- I developed functionalities using Java with Spring Boot on the backend and Angular on the frontend, integrating REST services and business logic with SQL databases.

### EDSA, Argentina - *Full Stack Developer*

- I participated in the development and evolutionary maintenance of internal applications for the client MAPFRE, working in demanding business environments.
- I developed functionalities in both frontend (Angular and Ionic) and backend (.NET), integrating business logic and ensuring consistency between layers.
- I actively worked with SQL and PL/SQL databases, optimizing queries and improving the performance of existing processes.

### Euler Tools, Spain- *Backend Developer*

- I participated in the development of an application based on Blockchain technology aimed at the marketing of crypto assets.
- I was part of the backend team working with Node.js and services on AWS, developing functionalities related to transaction management, integration with blockchain infrastructure and data persistence.
- I implemented and integrated smart contracts developed in Solidity, interacting with the network through web3.js, managing signatures, events and on-chain transaction execution.
- The project involved RESTful architecture and collaboration with the frontend team in React, ensuring efficient integration between smart contracts, backend and web client.

### Cepit, Argentina (Current Events)- *Teacher*

- Lecturer in the Full Stack Developer program (2-year program), supporting the comprehensive technical training of students in their first steps in software development
- In frontend we mainly work with React, addressing component architecture, state management and integration with APIs.
- In backend we develop applications with NestJS, including data modeling, use of SQL and NoSQL databases, and deployment concepts.

---

### National University of the Center, Argentina- *Professor - Assistant*

- I worked as an assistant teacher in subjects related to programming fundamentals and technology applied to organizations.
- In Programming I, I accompanied the initial training in programming logic using Java, working on concepts such as modularization, data structures (arrays and matrices) and algorithmic thinking
- In Information Technology in Organizations, we address the organizational structure, technological tools and professional vocabulary of the IT sector, including the use of Git and collaborative work practices.

### Freelance, Argentina - *Full Stack Developer*

- I designed and developed SaaS systems from scratch, participating in the complete functional and technical design of each solution. I primarily worked on backend development with Java (Spring Boot) and NestJS, defining architecture, data modeling, and building scalable REST APIs. I implemented solutions with PostgreSQL and MongoDB, prioritizing consistency, performance, and maintainability in SaaS environments. On the frontend, I worked with Angular and React, integrating dynamic interfaces with backend services. In various projects, I worked both independently and as part of a team, assuming the role of technical lead, supporting architectural decisions, and promoting best development practices.

## EDUCATION

### National University of the Center, Argentina, Tandil- *University Technician in Computer Application Development*

- A career focused on the creation and design of high-quality software. It covers creation, logic, and systems architecture.

## SKILLS

Frontend: Angular, React.js

Backend: Spring Boot, NestJS, Node.js

Base de datos: PostgreSQL, MongoDB, SQL, NoSQL, Elasticsearch

Lenguajes: Java, Kotlin, JavaScript, TypeScript, Solidity

Extras: Amazon Web Services (AWS), Git, web3.js, RESTful Architecture, Systems Design, SDLC, SaaS, Logic Programming, Technical Teaching

## LANGUAGES

English: Intermediate (Continuous learning).

---

Spanish: Native.

## CERTIFICATIONS

Angular: From Zero to Expert ([devtalles.com/certificates](https://devtalles.com/certificates))

Angular 14: The Complete Guide ([udemy.com/certificates](https://udemy.com/certificates))

Angular: From Zero to Legacy Expert

([udemy.com/certificates](https://udemy.com/certificates)) Angular University
